Populate the Static Author Field (v3.2)

Newscoop 3.2 introduces a new feature: static author field.

To properly populate the new field with article author names that you had in your pre-3.2 Newscoop, you need to invoke the set-author script. To do so, do the following:

1. Log in into the admin interface
2. Type the following url in the browser: <your site>/admin/set-author.php
3. In the resulting popup, select the field from which you would like to import author names.
